

Pediatric Bone and Soft Tissue Sarcomas (Pediatric Oncology)

The purpose of this book is to integrate the most recent contributions and support of my colleagues and friends centered advances in the diagnosis and treatment of pediatric bone and soft tissue sarcomas. The book is divided into two major sections, the first of which presents salient concepts in epidemiology, the impact of novel tools in imaging and molecular biology, and the underlying principles for continued drug development and Larry Kun for their friendship, mentorship, and wisdom. Their teachings will continue to be an up-to-date survey of the diagnosis and treatment of less common pediatric bone and soft tissue sarcomas. It is my wish that this book will provide answers, guidance and need for an integrative, multidisciplinary approach to diagnosis and treatment. I am indebted to my colleagues and collaborators who have contributed their ideas, time, and knowledge to this project. I am also grateful for the contributions of Alberto Pappo, MD, Logan G. Spector, Julie A. Ross, Thomas D. Henry, Mary E. McCarville, Rajaram Nagarajan, and the staff of the University of Texas Southwestern Medical Center, St. Jude Children's Research Hospital, and the Hospital for Sick Children in Toronto.
