

What is the Self?: A Philosophy of Psychology

The studies presented here in this work have a central point of departure: it is remarkable that we, as biological organisms in a social world, configure our lives in terms of selves. This book succeeds in bringing together different but related disciplines concerned with people and the histories and conditions of their lives. The answer worked out to the central question addressed is thus an optimistic one in that it shows the niche for knowledge of human nature and the texts that enfold lives, and of cause-effect links and meaningful things.
