

Design and Analysis of Experiments

An introductory text examining the fundamental methods of designing experiments and analyzing the results geared to advanced undergraduates or graduates majoring in engineering, science, business, economics, and statistics. Emphasizes proper design, model diagnostic checking, and interpretation of results. Covers all major design techniques, including completely randomized design, blocking, factorials, nesting, confounding, fractional factorials, regression modelling, response surfaces, and covariance analysis. Includes a full set of statistical tables.
