of a book published before 1923. This book may have occasional imperfections such as missing or blurred pages, poor pictures, errant page numbers, etc. All attempts thus far to detect an isolated magnetic pole have been unsuccessful. A permanent magnet is cut in two, each piece always has a north and a south pole. The relationship between magnetism and electricity was discovered in 1820. The first expedition to reach the geographic South Pole was led by the Norwegian explorer Roald Amundsen in 1911. His initial plans had focused on the Arctic and the conquest of the North Pole. Cook and Robert E. Peary each claimed to have reached the North Pole in 1906. The Arctic drift could wait for a year or two until the South Pole had been reached. This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work was reproduced in 1964 by the University of Michigan Library, Special Collections Department. This is a reproduction of a book published before 1923.
