

Interpersonal process in psychotherapy: A guide for clinical training

This book concentrates on the interaction or process of what goes on between the client and the counselor or clinician, thus capturing the subjective experience of becoming a therapist. Very few books do this, especially at Teyber's level of detail. Teyber distills essential contributions from interpersonal, family systems, and object relations theories, applying them cogently to direct clinical practice. The book is rich in examples and case histories, with dialogues illustrating how the process of counseling unfolds. Teyber clearly explains the relationship dimension that is often the most difficult for TTpracticumTT instructors to present systematically.
