

Pottery of Prehistoric Honduras: Regional Classification and Analysis

The contributors to this volume have addressed issues of systematics in pottery analysis that perplex archaeologists wherever they work. These issues are not approached by setting forth rules or by adopting a how-to approach but rather by example as the various researchers give the background to their work, explain their method, and present the classified pottery from their investigations. An in-process statement of what we are learning from pottery about chronology, interaction, and the nature of regional cultural development, this volume can be used by archaeologists working in southern Mesoamerica and northern Central America, who will find it valuable for comparative analysis, and by archaeologists dealing with issues of systematics in pottery analysis in different culture areas but facing many of the same problems that researchers do in Honduras.
